RELEASE QA checklist

Before to publuc release a version check and do the following:

- [ ] full chk / review for FIXME & run `pdm build_all`
- [ ] change release name from ".dev" to final one (change all occurrences)
- [ ] update version string in:
  - `.../xl2roefact/__version__.py` variable `__version__`
  - `/mkdocs.yml` section `extra`
- [ ] build all: app, documentations, site
- [ ] clean if necessary the `.../dist/` directory

Optional if possible do:

- [ ] extract version items in a dedicated file in `changelog_history/`. The pattern for name is `CHANGELOG-<version>.md`
- [ ] in main CHANGELOG refer thet file (archives section) and clean it from not achieved entries
- [ ] archive locally (in `880-RLSE/.../` directory) all resulted deliverable

How to Install `xl2roefact` as local in project package

In master project root (ie, not `xl2roefact/` directory, but main project directory) execute `pip install -e xl2roefact`. Now package is installed and all its modules are available.
