- 240201piu\_a reorganized `x12roefact*` components by disseminating the installable application, which is something available "as is now" just for Windows operating system. For Linux there is no difference between command line application and Python package *from an end user point of view*.

- 240131piu\_a updated `mkdocs.yml`: cleaned navigation, created version variables, updated default site build directory to `docs/`, cleared excluded directories entry

- 240129piu\_b cleanup project docs, requirements, fresh install ==> published site as is at this point (invoice template finished)

- 240127piu\_d Unify main project `/README.md` with `doc_src/index.md`:
  - make the same INDEX just in the project root == index / README of whole project
  - keep from actual project README.md the section ref project identification and move it to end of file as last section
- 240127piu\_c created `/index.html` to redirect to "real" system index (`doc_src/index.md`) and prevent usage of project `README.md` file instead
- 240128piu\_c checked work 240127piu\_a, 240127piu\_b, updated `about.md` and navigation with ref to sys structure (`.../810.05a-system_components.md`)
