CHANGELOG 0.1.10.dev

0.1.10 command interface improved, msi package building, invoice template & updated documentation (231207 h12:00)

- 231207piu_b build a MSI package for 0.1.10 version ==> `0.1.10-xl2roefact-0.1-win64.msi`, also installed Python 3.11 + cx-Freeze & updated `requirements_xl2roefact.txt`
- 231207piu_a FIXED errors due to Excel files directory duplication in `xl2roefact` & `rdinv()`
- 231206piu_a clean code for `rdinv` & `xl2roefact`, reviewed and closed some open issues (todos, notes, ...)
- 231205piu_b made a directory for INVOICE TEMPLATE (`excel_invoice_template/`) to be delivered with solutions "for who need a simple template", also write here a `README_excel_invoice_rules.md` to describe all required conditions in order to be "RECOGNIZED & TRANSLATED to JSON"
- 231205piu_a change all solution to use `rich` library instead of `colorama` (Rich library ref <https://rich.readthedocs.io/en/stable/index.html>)
 - ✓ drop all `from colorama import Fore, Back, Style`
 - ✓ add new `from rich import print`
 - ✓ update all places where `{Fore....}` with `[...]` as:
 - ✓ `{Fore.YELLOW}` with `[yellow]`
 - ✓ `{Fore.GREEN}` with `[green]`
 - ✓ `{Fore.MAGENTA}` with `[magenta]`
 - ✓ `{Fore.BLUE}` with `[blue]`
 - ✓ `{Fore.CYAN}` with `[cyan]`
 - ✓ `{Fore.RED}` with `[red]`
 - ✓ change all `typer.echo` with `print`
 - ✓ update all places where `{Style.RESET_ALL}` with `[/]`
- 231204piu_c build new executable and installer ==> `dist/0.1.10.231204piu_a-xl2roefact-0.1-win64.msi`
- 231204piu_b created `./doc/` renamed and moved all documentation documents - intention to keep clean `xl2roefact` root

- 231204piu_a x12roefact x12json check rdinv() result and if return False, ONLY print a message of "INFO note" then continue with next file (the effective error was print by module itself) && build a new executable package
==> dist/0.1.10.231204piu_a-exe.win-amd64-3.10.zip
