CHANGELOG 0.1.14.dev

0.1.14.dev invoice issue date (231217 h07:00)

- 231217piu_b build packages for:
 - application deployment package ==> dist/0.1.13-xl2roefact-0.1-win64.msi
 - ✓ cleaned, tested, created packages (saved to ==> .../880-RLSE/880.90-RLSE Source Code Archives)
 - ✓ updated pyproject.toml
- 231217piu_a invoice header, issue date (&& ATTN pendulum raise error, see rdinv.py line #17, ==>
 MAYBE JUST TRY Arrow or standard datetime)
- 231216piu_a review, improve & clean code for: xl_invoices/config_settings.py, xl_invoices/rdinv.py
- 231215piu_b FIXED configs loaded from config_settings: rdinv module load (init) all constants as global variables (because they are subject to change / "improve" values as reading Excel file, for example DEFAULT_CURRENCY)
- 231215piu_a changed dir name xl_invoice_modules/ to xl_invoices or classic xl2roefact as this will be the package name. This is a Python official RECOMMENDATION not a constraint
- 231214piu_a made xl2roefact Python standard package (moved xl2roefact modules to a dedicated directory (xl_invoice_modules/) with intention to publish package)
