RELEASE QA checklist

Before to public release a version check and do the following:
<pre>full chk / review for FIXME & run pdm build_all</pre>
change release name from ".dev" to final one (change all occurrences)
update version string in:
•/xl2roefact/versionpy variableversion
• /mkdocs.yml section extra
build all: app, documentations, site
clean if necessary the/dist/ directory
Optional if possible do:
extract version items in a dedicated file in <code>changelog_history/</code> . The pattern for name is <code>CHANGELOG-version>.md</code>
in main CHANGELOG refer thet file (archives section) and clean it from not achieved entries
archive locally (in 880-RLSE// directory) all resulted deliverable

How to Install x12roefact as local in project package

In master project root (ie, not x12roefact/ directory, but main project directory) execute pip install -e x12roefact. Now package is installed and all its modules are available.
