CHANGELOG 0.3.2b0

0.3.2b0 single EXE version (240311 h16:30)

- 240311piu02 run script build_doc to update ref libutils.py module. Update & publish site.
- 240311piu01 update downloads.md to include single exe resource starting with last stable version = 0.3.1b1
- 240308piu00 update app_cli, option --version to get normalized version string
- 240308piu01 make single EXE with pyinstaller
 - ✓ 1. ck & install pyinstaller in local environment. Update it if necessary
 - 2. adhoc try to execute it. Make a command for (build_sexe) RESULTS: .../xl2roefact/dist/xl2roefact/.. with exe & various files
 - ✓ 3. created a PDM script for command build sexe.
 - ✓ 4. result produced in ...dist/xl2roefact/dist/ a little bit unacceptable but ok for that step.
 - ✓ 5. adjust command build_sexe to produce a single file EXE RESOLUTION: up here resulted one file xl2roefact.exe in .../dist/ directory
 - ✓ 6. adjust command build_sexe to produce exe in other-temp directory for name processing (req here in nxt item-step)
 - 7. installed packaging package and updated xl2roefact.__version__ module with function normalized_version(raw_version: str) -> str
 - ✓ 8. adjust command build_sexe to produce right file name as xl2roefact-0.3.1.b1-win64.exe

and move it in .../dist/ dir. Specs:

- in pyproject.toml make post_build_sexe entry of call type {call =
 "xl2roefact.libutils:complete_sexe_file()"}
- ✓ update __version__ modules to accommodate this function
- ✓ skeleton rdy libutils module for function complete_sexe_file() that rename and move resulted exe file: .../dist_sexe/xl2roefact_to_update_name.exe --> .../dist/xl2roefact-version-win64.exe`
- ✓ finalize & test code of complete_sexe_file() ==> PASS
- ✓ 9. in pyproject.toml include build_sexe cmd in build_all
- ✓ 10. build single exe for current stable version of xl2roefact = 0.3.1b1. Updated tech doc DLD (xl2roefact API Reference)
- ✓ 11. FIX: single exe not work. FIX: Must to HAVE DIFFERENT NAME THAN DIRECTORY xl2roefact/. Created copy xl2roefact_copy_for_sexe.py for xl2roefact.py to be used by pyinstaller in build_sexe script. This file should be kept on as a perfect copy of original (as sym-link doesn't work).
- 240307piu01 xl2roefact pdm environment created a script for **build PyPi** operation. PDM run script CAN be used from local development environment but CANNOT be used in build_pypi automation, at execution raise error that cannot execute mkdir on branch NOT ANALYZED, just reverted workflow to previous one
- 230406piu08 updated downloads.md ref end-of-life date of all 0.1... versions: 10-March-2024

Last update: March 14, 2024
