## api-to-roefact by RENware Software Systems

- CHANGELOG 0.1.18.dev
  - 0.1.18.dev invoice customer CUI partial invoice total values calculations (240105 h08:00)

## CHANGELOG 0.1.18.dev

## 0.1.18.dev invoice customer CUI partial invoice total values calculations (240105 h08:00)

- 240105piu\_c updated xl2roefact package README.md file (with new sections for intro to Excel invoice content rules, tutorial TODO, reference to technical doc)
- 240105piu\_b invoice customer search and persist for "CUI"
- 240105piu\_a rdinv.def get\_excel\_data\_at\_label(...) changed strategy for DOWN search-method made it optional with default True (useful for Partners set-of KVs where is supposed to be or IN-LABEL or in RIGHT but NOT DOWN because there is a list of KVs not just one placed anywhere in Excel doc) TODO: this is subject of doc update
- 240103piu\_d rdinv.def get\_excel\_data\_at\_label(...) changed strategy for IN-LABEL search-method to return all string except first word (supposed to be label) separated by space character (old strategy was to get only last work from all string)
- 240103piu\_c ref invoice customer created in config\_settings.py PATTERNs for search keys PATTERN\_FOR\_PARTNER\_ID (CUI or ID), PATTERN\_FOR\_PARTNER\_LEGAL\_NAME
- 240103piu\_b calculated item lines VAT amount as cac\_InvoiceLine.LineVatAmmount as raw float value (not rounded to be able to round just invoice TOTAL)
- 240103piu\_a rdinv.rdinv() updated JSON -- XML map (part of function \_build\_meta\_info\_key(...))
- 240102piu\_a rdinv.rdinv() upd & improved a clear Customer specific XML compliant structure. Targeted this XML structure:

- 240101piu\_a clean useless & obsolete project files, test new full build (MSI, Python wheel, documentation) ==> PASS OK
- 231229piu\_a invoice customer ( <cac:AccountingCustomerParty> ) detect & set area to search for specific keys (like CUI, RegCom, IBAN, ...)
  - ✓ 1. established AREA TO SEARCH for PARTNER data an \_area\_to\_search (~line 244)

- ✓ 2. updated config\_settings.py changed: (for a clear understating of constant scope, because will follow others for specific keys like: "reg com", "CUI", "bank / IBAN / cont", ...)
  - PATTERN FOR INVOICE CUSTOMER LABEL --> PATTERN FOR INVOICE CUSTOMER SUBTABLE MARKER
  - PATTERN\_FOR\_INVOICE\_SUPPLIER\_LABEL --> PATTERN\_FOR\_INVOICE\_SUPPLIER\_SUBTABLE\_MARKER
- ✓ 3. set-persist \_area\_to\_search for next steps & save its key-info in associated invoice JSON (for further references) rdinv() ~line 239
- ✓ 4. updated main xl2roefact README.md document ref latter changes and app structuring, concepts, ...(ideas evolving :)...
- ✓ 5. done code for cac\_AccountingSupplierParty key by iterating full invoice\_header\_area["customer\_area"] structure
- 231228piu\_a improved documentation generation:
  - ✓ updated all modules docstring(s) to a right markdown representation in generated documentation (ex: when use bullets THEN DO NOT indent at 1st level)
  - **@IMP\_NOTE:** Changed generated documentation file to doc/810.05a-xl2roefact\_DLD\_specs.md and referred in main doc/810.05a-xl2roefact\_component.md as this being a final solution for whole project documentation (that generated with mkdocs)
  - ✓ updated pyproject.toml, [tool.pdm.scripts] table with new generated doc file name (810.05a-xl2roefact\_DLD\_specs.md)
- 231227piu\_b updated xl2roefact.rdinv module ref dropped \_ chars from internal function names to allow doc generation by PyDoc until will produce a YAML file for PyDoc generator (where will be able to specify concrete list of objects regarding their names)
- 231227piu\_a generated a first draft of markdown documentation:
  - ✓ used Pydoc Markdown @ https://niklasrosenstein.github.io/pydoc-markdown/usage/yaml/#yaml-example
  - results ==> <PJ\_ROOT>/xl2roefact/doc/generated\_810.05a-xl2roefact\_component.md
  - created PDM shell command pdm run (command just for quick remembers: pydoc-markdown -I
    xl2roefact --render-toc >doc/generated\_810.05a-xl2roefact\_component.md)
- 231226piu\_b reviewed xl2roefact all "in use" code and updated docstrings
- 231226piu\_a made some useful PDM scripts (ref pyproject.toml, table section [tool.pdm.scripts]) like build commands for:
  - pdm build\_wheel Python package,
  - pdm build\_msi MSI package,
  - pdm build\_all build all packages
  - pdm xl2roefact run xl2roefact command
  - ✓ updated doc/810.05a-xl2roefact\_component.md
