```

version

current 0.6rc0, previous 0.5.4

normalized_version

```
def normalized_version(raw_version: str = __version__) -> str
```

transform version string in canonical form.

Used in __init__.py to return __version__ object as will be seen by package consumers

Arguments:

raw_version - a raw version string. Defaults to package current version string.

Returns:

str: canonical version string

app_cli

app_cli: the command line application for all xl2roefact functionalities.

Identification:

- copyright: (c) 2023 RENWare Software Systems
- author: Petre lordanescu (petre.iordanescu@gmail.com)

about

```
@app_cli.command()
def about()
```

Provide a short application description.

settings

```
@app_cli.command()
def settings(rules: Annotated[
    bool,
    typer.
    Option("--rules", "-r", help="show settings recommended update rules"),
] = False)
```

Display application configuration parameters and settings that are subject to be changed by user.

Arguments:

• rules - show recommended rules to follow when change application configurable settings (available in both RO & EN languages). Defaults to False.

xl2json

```
@app_cli.command()
def x12json(
    file_name: Annotated[
        str, typer.Argument(
           help="files to process (wildcards allowed)")] = "*.xlsx",
    files_directory: Annotated[
        Path,
        typer.Option(
            "--files-directory",
            "-d",
            exists=False,
            file_okay=False,
            dir_okay=True,
            writable=True,
            readable=True,
            resolve_path=True,
            help=
            "directory to be used to look for Excel files (if default directory does not exists
will consider current directory instead)."
    ] = "invoice_files/",
    owner_datafile: Annotated[
        Path,
        typer.Option(
            "--owner-datafile",
            "-o",
            exists=False,
            file_okay=False,
            dir_okay=False,
            writable=False,
            readable=True,
            resolve_path=False,
            help="File to read invoice supplier (owner) data instead Excel."),
    ] = None,
    verbose: Annotated[
       bool,
        Option("--verbose", "-v", help="show detailed processing messages"),
    ] = False)
```

Extract data from an Excel file (save data to JSON format file with the same name as original file but .json extension).

Arguments:

- file_name files to process (wildcards allowed).
- files_directory directory to be used to look for Excel files. Defaults to invoice_files/. NOTE: if default directory does not exists will consider current directory instead
- owner_datafile File to read invoice supplier (owner) data instead Excel.
- verbose show detailed processing messages". Defaults to False.

called_when_no_command

```
@app_cli.callback(invoke_without_command=True)
def called_when_no_command(
    ctx: typer.Context,
    version: Annotated[
        bool,
        typer.Option("--version", "-V", help="show application version"),
] = False)
```

Application global information (command agnostic).

run

NOTE: for run "reason to be" as copy of app_cli see iss 0.1.22b 240216piu_a

__init__

version

default conversion takes place over xl2roefact actual version

__main__

xl2roefact.main: Python package standard file to assure run as python -m xl2roefact.

Identification:

- code-name: __main__
- copyright: (c) 2023 RENWare Software Systems
- author: Petre Iordanescu (petre.iordanescu@gmail.com)

Deployments:

- · Windows: MSI installer with EXE application.
- Linux: x12roefact executable shell as wrapper for x12roefact.py.

Specifications:

- command general format: python -m x12roefact [OPTIONS] COMMAND [ARGS]....
- help: python -m x12roefact --help.

sys_settings

System database and parameters.

This module IS NOT intended to be modified by end users or administrators. Only development stuff can alter this database because application code must be updated accordingly.

- NOTE for updaters: because dependencies, code sections should follow strict enumerated order in comments
- copyright: (c) 2024 RENWare Software Systems
- author: Petre Iordanescu (petre.iordanescu@gmail.com)

Idxml

ldxml: modul de incarcare a facturii in sistemul ANAF E-Factura

Identification:

- code-name: ldxml
- copyright: (c) 2023 RENWare Software Systems
- author: Petre Iordanescu (petre.iordanescu@gmail.com)

Specifications:

- document cerinte initiale: 110-SRE-api_to_roefact_requirements.md section Componenta x12roefact
- INTRARI: fisier f-XML
- IESIRI: raport cu validarea si identificatorul incarcarii

wrxml

wrxml: modul de generare a fisierului format XML

Identification:

- code-name: wrxml
- copyright: (c) 2023 RENWare Software Systems
- author: Petre Iordanescu (petre.iordanescu@gmail.com)

Specifications:

- document cerinte initiale: 110-SRE-api_to_roefact_requirements.md section Componenta x12roefact
- INTRARI: fisier f-JSON
- IESIRI: fisier format XML conform cerintelor si sistemului ANAF E-Factura (cod: f-XML)

rdinv

rdinv: modul de procesare a fisierului Excel ce contine factura si colectare a datelor aferente.

Formatul acceptat fisier Excel este XLSX.

Identification:

- code-name: rdinv
- copyright: (c) 2023 RENWare Software Systems
- author: Petre Iordanescu (petre.iordanescu@gmail.com)

Specifications:

- document cerinte initiale: 110-SRE-api_to_roefact_requirements.md section Componenta x12roefact
- INTRARI: fisier format XLSX ce contine factura emisa (cod: f-XLSX)
- IESIRI: fisier format JSON imagine a datelor facturii (cod: f-JSON)

rdinv

```
def rdinv(file_to_process: str,
    invoice_worksheet_name: str = None,
    *,
    debug_info: bool = False,
    owner_datafile: Path = None) -> dict
```

read Excel file for invoice data.

Produce a dictionary structure + JSON file with all data regarding read invoice: canonical KV data, meta data, map to convert to XML and original Excel data.

Arguments:

- file_to_process the invoice file (exact file with path).
- invoice_worksheet_name the worksheet containing invoice, optional, defaults to first found worksheet.
- debug_info key only, show debugging information, default False.
- owner_datafile specify a file to read supplier data from, default None meaning to read supplier data from Excel file

Returns:

• dict - the invoice extracted information from Excel file as dict(Invoice: dict, meta_info: dict, excel_original_data: dict)

Notes:

- db: pylightxl object: EXCEL object with invoice (as a whole)
- ws: pylightxl object: WORKSHEET object with invoice

get_excel_data_at_label

get "one key Excel values", like invoice number or invoice issue date.

Arguments:

- pattern_to_search_for for example for inv number, will pass the PATTERN_FOR_INVOICE_NUMBER_LABEL.
- worksheet the worksheet containing invoice (as object of pyxllight library).
- area_to_scan area of cells to be searched, default whole worksheet.
- targeted_type what type expect (will try to convert to, if cannot will return str), default str.
- down_search_try establish if DOWN search method is tried, default True.

Returns:

None if not found OR dictionary containing: * "value": int | float | str - the value found covenred to requested targeted_type if possible or str otherwise; if "out of space" then returns None * "location": (row, col) - adrees of cell where found value

Notes:

• normal scan order is 1.RIGHT, 2.DOWN (if allowed), 3.IN-LABEL only in given area and pattern.

mk_kv_invoice_items_area

```
def mk_kv_invoice_items_area(invoice_items_area_xl_format) -> dict
```

transform invoice_items_area in "canonical JSON format" (as kv pairs).

Arguments:

• invoice_items_area_xl_format - invoice items area in Excel format (ie, DataFrame with row, col, data).

Returns:

• invoice_items_area_xl_format - dictionary with invoice items in Excel format (ie, rows, columns).

Notes:

• for ROefact XML model (& plan) see invoice_files/__model_test_factura_generat_anaf.xml.

get_invoice_items_area

get invoice for invoice_items_area, process it and return its Excel format.

Process steps & notes:

- · find invoice items subtable.
- · clean invoice items subtable.
- · extract relevenat data.
- NOTE: all Excel cell addresses are in (row, col) format (ie, Not Excel format like "A:26, C:42, ...")

Arguments:

- worksheet the worksheet containing invoice (as object of pyxllight library).
- invoice_items_area_marker string with exact marker of invoice items table.
- NOTE this is the UPPER-LEFT corner and is determined before calling this procedure.
- wks_name the wroksheet name (string) of the worksheet object.

Returns:

• invoice_items_area - dictionary with invoice items in Excel format (ie, rows, columns).

get_merged_cells_tobe_changed

scan Excel file to detect all merged ranges.

Arguments:

- file_to_scan the excel file to be scanned.
- invoice_worksheet_name the worksheet to be scanned.
- keep_cells_of_items_ssd_marker tuple with cells that will be marked IN ANY CASE to be preserved:
- use case: to keep all potential invoice items ssd rows.
- format: tuple(row, col, val) where row & col are relevant here
- default: None

Returns:

• cells_to_be_changed - list with cells that need to be chaged in format (row, col).

Notes:

- function is intended to be used ONLY internal in this module.
- use openpyx1 library to do its job.

build_meta_info_key

build meta_info key to preserve processed Excel file meta information: start address, size.

Notes:

- (1.) all cell addresses are in format (row, col) and are absolute (ie, valid for whole Excel file).
- (2.) this function is designed to be used internally by current module (using outside it is not guaranteed for information 'quality').

Arguments:

- excel_file_to_process name of file to process as would appear in meta_info key.
- invoice_worksheet_name the worksheet name as would appear in meta_info key.
- ws_size worksheet size as would appear in meta_info key (index 0 max rows, index 1 max columns).
- keyword_for_items_table_marker the content of cell used as start of invoice items subtable as would appear in meta_info.
- found_cell position of cell used as start of invoice items subtable as would appear in meta_info key (index 0 row, index 1 column).

Returns:

meta_info - dictionary built with meta information to be incorporated in final invoice dict

get_partner_data

Get invoice partener data from Excel.

Notes:

- for developers: function works by generating side effects and must be located in rdinv.py
- side effects: this function works by directly modifying param_invoice_header_area sent parameter
- supplier_datafile exception: if file is not found or cannot be read, this function will force complete application termination (sys.exit)

Arguments:

- partner_type one of "CUSTOMER", "SUPPLIER" or "OWNER" to specify for what kind of parner get data. The value "OWNER" is designed to get data from an outside database / file (master data)
- wks current work-on pylightxl Worksheet object
- param_invoice_header_area mode IN-OUT, outside param_invoice_header_area as used and needed in rdinv(). This function will write back in this variable
- supplier_datafile for partner_type = "CUSTOMER" here is expected the file where to get supplier data

Returns:

None - all data is produced directly in parameters as side effect

chkxml

chkxml: modul de validare a facturii in sistemul ANAF E-Factura

Identification:

- code-name: chkxml
- copyright: (c) 2023 RENWare Software Systems
- author: Petre Iordanescu (petre.iordanescu@gmail.com)

Specifications:

- document cerinte initiale: 110-SRE-api_to_roefact_requirements.md section Componenta x12roefact
- INTRARI: fisier f-XML
- IESIRI: raport cu eventualele erori de validare

chkisld

chkisld: modul de verificare a starii de incarcare a unei facturi emise

Identification:

• code-name: chkisld

- copyright: (c) 2023 RENWare Software Systems
- author: Petre Iordanescu (petre.iordanescu@gmail.com)

Specifications:

- document cerinte initiale: 110-SRE-api_to_roefact_requirements.md section Componenta x12roefact
- INTRARI: fisier f-XLSX sau numarul / cheia / codul facturii
- IESIRI: valoarea echivalent TRUE daca factura a fost deja incarcata sau valoare echivalent FALSE daca factura nu a fost incarcata

libutils

general utilities library for all x12roefact components and modules.

Identification:

- code-name: libutils
- copyright: (c) 2023, 2024 RENWare Software Systems
- author: Petre Iordanescu (petre.iordanescu@gmail.com)

Components:

- complete_sexe_file() -> bool: Rename and move resulted exe file (called from build_sexe script)
- dict_sum_by_key(dict, str) -> float:Sum a dictionary for a given key at all depth levels
- find_str_in_list(list, list) -> int: Search more strings (ie, a list) in list of strings
- hier_get_data_file(file_name: str) -> Path:Get Path(file_name) from hierarchy of locations
- invoice_taxes_summary(list[dict]) -> dict: Calculates invoice taxes summary as required by ROefact requirements
- isnumber(str) -> bool: Test a string if it could be used as number (int or float)

hier_get_data_file

```
def hier_get_data_file(file_name: str) -> Path | None
```

Get Path(file_name) from hierarchy of locations: (1) current directory, (2) package data/ directory, (3) None is file does not exists in 1 or 2 locations.

Arguments:

file_name - the name of the file to be returned as full path

Returns:

• Path - path of file if was found in (1) or (2) locations or None if not found

complete_sexe_file

```
def complete_sexe_file(drop_source: bool = True) -> bool
```

Rename and move resulted exe file. This function is dedicated only to development phase, so various objects are hard coded.

Specs:

- file to process .../dist_sexe/xl2roefact_to_update_name.exe --> .../dist/xl2roefact-version-win64.exe
- Note 1: all function code suppose that current directory is root of x12roefact, ie where is located pyproject.toml of package

Arguments:

• drop_source - indicate to delete source file after copying, ie make a "move" operation, otherwise make a copy keeping the source file. Default behaviour is to delete source.

Returns:

bool - True if file was found, renamed and moved with no error

invoice_taxes_summary

```
def invoice_taxes_summary(invoice_lines: list[dict]) -> list
```

Calculates invoice taxes summary as required by ROefact requirements.

Arguments:

• invoice_lines - section with item lines from 'big' invoice dictionary

Returns:

• list - usable for "cac_TaxSubtotal" key

dict_sum_by_key

```
def dict_sum_by_key(search_dict: dict | list[dict], sum_key: str) -> float
```

Sum all dictionary (or list off dictionaries) items, at all levels, for a given key.

Arguments:

- search_dict dictionary to be searched for
- sum_key key to be searched

Returns:

• float - with required sum

isnumber

```
def isnumber(a_string: str) -> bool
```

test if a string is valid as any kind of number.

Arguments:

• a_string - input string.

Returns:

• True - if input string is valid as any kind of number, orherwise False.

find_str_in_list

```
def find_str_in_list(list_of_str_to_find: list, list_to_search: list) -> int
```

find a substring from list_of_str_to_find in elements of list_to_search.

Arguments:

- list_of_str_to_find list of strings to search for.
- list_to_search liste where to search for substrings.

Returns:

• index - the index of list item which contains str_to_find (first found) or None if not found.

config_settings

Configuration and setting parameters.

Regulile recomandate se gasessc in documentul (recommended rules are in document x12roefact/data/README_app_config_rules.md)

Public objects:

• rules_content: contains the rules text (rendered)

Info:

- copyright: (c) 2023 RENWare Software Systems
- author: Petre Iordanescu (petre.iordanescu@gmail.com)

DEFAULT_DUE_DATE_DAYS

NOTE: "pattern-uri" (sabloane) de identificare si regasire a datelor folositi de
