Automation tools

Build site

Merge branch which contains mkdocs site to build into branch build-site. The site will be built according to mkdocs.yml specs.

Build xl2roefact CLI app, library packages and DLD doc

Merge to branch build-xl2roefact. The building process will execute pdm run build_all command in directory xl2roefact/. Get back results by merging build-xl2roefact branch back to your initial branch.

Run xl2roefact CLI app

Commit to branch test-x12roefact. The process will execute

```
pdm run xl2roefact xl2json -d ./tests >./tests/_test_on_git_results.txt
```

in directory x12roefact/. Results of execution are written on x12roefact/tests/ and stdout redirected to file _test_on_git_results.txt.
