## **RENware Software Systems**

## **INVOICEtoROefact** Project

- CHANGELOG 0.1.14.dev
  - 0.1.14.dev invoice issue date (231217 h07:00)

## CHANGELOG 0.1.14.dev

## 0.1.14.dev invoice issue date (231217 h07:00)

- 231217piu\_b build packages for:
  - □ application deployment package ==> dist/0.1.13-x12roefact-0.1-win64.msi
  - cleaned, tested, created packages (saved to ==> .../880-RLSE/880.90-RLSE Source Code Archives)
  - updated pyproject.toml
- 231217piu\_a invoice header, issue date (&& ATTN pendulum raise error, see rdinv.py line #17, ==> MAYBE JUST TRY Arrow or standard datetime)
- 231216piu\_a review, improve & clean code for: xl\_invoices/config\_settings.py, xl\_invoices/rdinv.py
- 231215piu\_b FIXED configs loaded from config\_settings: rdinv module load (init) all constants as global variables (because they are subject to change / "improve" values as reading Excel file, for example DEFAULT\_CURRENCY)
- 231215piu\_a changed dir name xl\_invoice\_modules/ to xl\_invoices or classic xl2roefact as this will be the package name. This is a Python official RECOMMENDATION not a constraint
- 231214piu\_a made xl2roefact Python standard package (moved xl2roefact modules to a dedicated directory (xl\_invoice\_modules/) with intention to publish package)
