TODOs to make x12roefact package

- TBD... mk dir ./xl2roefact/` as library shell ...
 - **OBIECTIV** to mk x12roefact package KEEP IN MIND that CLI app MUST be deployed separatelyy anyway (pentru PFA-uri, sigur instaleaza MSI-ul si trebuie sa aiba toate directoarele acolo, dar trebuie sa fie si separat, deci MSIul si dist/ramin)
 - ✓ DONE@231214piu_a MOVE_in: ./invoice_files/.gitkeep,
 './excel_invoice_template/* , ./doc/MANPAGE_xl2roefact.txt --> FROM NOW, library is 99% active (not published @ 231214) and can be used as part of whole xl2roefact` system including CLI app
 - pay attn main README...
 - write "invoice filling rules" (these are in <code>config_settings.py</code>) ==> make a dedicated section in <code>./docs/</code>
