RENware Software Systems

INVOICEtoROefact Project

CHANGELOG 0.1.14.dev

0.1.14.dev invoice issue date (231217 h07:00)

- 231217piu_b build packages for:
  - ✅ application deployment package ==> `dist/0.1.13-xl2roefact-0.1-win64.msi`
  - ✅ cleaned, tested, created packages (saved to ==> `.../880-RLSE/880.90-RLSE Source Code Archives`)
  - ✅ updated `pyproject.toml`
- 231217piu_a invoice header, issue date (&& ATTN pendulum raise error, see `rdinv.py` line #17, ==> MAYBE JUST TRY `Arrow` or standard `datetime`)
- 231216piu_a review, improve & clean code for: `xl_invoices/config_settings.py`, `xl_invoices/rdinv.py`
- 231215piu_b FIXED configs loaded from config_settings: `rdinv` module load (init) all constants as global variables (because they are subject to change / "improve" values as reading Excel file, for example `DEFAULT_CURRENCY`)
- 231215piu_a changed dir name **`xl_invoice_modules/`** to `xl_invoices` or classic `xl2roefact` as this will be the package name. This is a Python official RECOMMENDATION not a constraint
- 231214piu_a made xl2roefact Python standard package (moved `xl2roefact` modules to a dedicated directory (`xl_invoice_modules/`) with intention to publish package)
