Automation tools

Build site

Merge branch which contains `mkdocs` site to build into branch `build-site`. The site will be built according to `mkdocs.yml` specs.

Build xl2roefact CLI app, library packages and DLD doc

Merge to branch `build-xl2roefact`. The building process will execute `pdm run build_all` command in directory `xl2roefact/`. Get back results by merging `build-xl2roefact` branch back to your initial branch.

Run xl2roefact CLI app

Commit to branch `test-xl2roefact`. The process will execute

```
pdm run xl2roefact xl2json -d ./tests >./tests/_test_on_git_results.txt
```

in directory `xl2roefact/`. Results of execution are written on `xl2roefact/tests/` and `stdout` redirected to file `_test_on_git_results.txt`.
